

A MISSIONARY'S GUIDE TO RECLAIMING THE BLOCKY
WORLD

MINECRAFT OVERTAKEN

Fifteen missions · Three tiers of difficulty · One world to take back

“The Old Builders are gone. Their farms went wild, their lanterns died, and the night crept in where light once stood. The world has been overtaken — by shadow, by chaos, by the creatures that own the dark. But they left one thing behind: a map, a compass, and a commission. You are the missionary of the block. Your task is not merely to survive. Your task is to take the world back — one mission at a time.”

— from the Book of the First Light

Version 1.0 · Survival mode · Seed: OVERTAKEN
Missions 1-15 · Easy → Normal → Hard

HOW TO USE THIS BOOK

This is not a story you read. It is a mission log you complete.

The book contains **fifteen missions**, organized in three tiers of difficulty:

TIER	MISSIONS	DIFFICULTY	WHAT YOU WILL DO
Tier I	1–5	Easy	Build your first home, farm, road, tower, and mine
Tier II	6–10	Normal	Carve an underground base, smelt iron, bridge a chasm, enter the Nether, master redstone
Tier III	11–15	Hard	Hunt the stronghold, slay the dragon, raid the ocean monument, build a sky city, raise the Beacon of Overtaking

Every mission follows the same format:

- **MISSION BRIEFING** — what is happening in the world, and why it matters
- **OBJECTIVE** — exactly what you must accomplish
- **SUPPLIES** — the blocks and items you must gather, and how many
- **COORDINATES** — exactly where in the world the mission takes place
- **THE PLAN** — the step-by-step execution
- **SUCCESS CHECKLIST** — how you will know the mission is complete
- **MISSIONARY NOTE** — a short reflection from the field

Setting Up the World

Use these settings so the coordinates in this book match your world:

- **World name:** Overtaken
- **Seed:** OVERTAKEN
- **Game mode:** Survival
- **Difficulty:** Normal (Easy if you are new, Hard if you are a veteran)
- **World type:** Default
- **Cheats:** Off. A missionary earns every block.

The Rules of the Mission Field

1. No creative mode. If a mission says collect 64 iron ore, you mine it.
2. No teleporting. You walk, you climb, you swim — or you build the thing that carries you.
3. If you die, you return and finish. The world does not reset for you.

4. A mission is only complete when every item on the success checklist is checked.

READING THE COORDINATES

Every mission in this book gives you exact coordinates. Before you take a single step, learn to read them. This is the single most important skill in the book.

The three numbers are always in the same order: X, Y, Z.

AXIS	MEANING	POSITIVE (+)	NEGATIVE (-)
X	East / West	East	West
Y	Up / Down (height)	Up	Down
Z	South / North	South	North

Sea level is Y = 63. This is your anchor. If a mission says Y = 64, you are one block above sea level — standing on the surface. If it says Y = 16, you are 47 blocks underground, near the diamond layer. If it says Y = 150, you are building in the sky.

Here is how to read a pair of camps from an old mission log:

CAMP	X	Y	Z
Camp 1	-185	61	-190
Camp 2	-189	5	-161

Reading them:

- Camp 2 is **4 blocks west** of Camp 1 (X went -185 → -189, toward negative = west)
- Camp 2 is **56 blocks lower** (Y went 61 → 5 — that is a deep tunnel; Camp 1 sits just below the surface, Camp 2 crouches just above bedrock)
- Camp 2 is **29 blocks north** of Camp 1 (Z went -190 → -161, toward positive = south... wait — -161 is *more* positive than -190, so Camp 2 is actually **29 blocks south**)

Rule of thumb:

- **X or Z changes → you are moving sideways** (north / south / east / west)
- **Y changes → you are moving up or down**
- Y is your floor number. To find a place again: match X and Z first, then climb or dig until Y matches too.

The one exception: the Nether. Coordinates there are roughly one-eighth of the Overworld. This book gives you both sets when a mission crosses over.

TIER I — EASY

The first five missions stay near the surface. They teach you the rhythm of the missionary life: gather, build, light, plant, descend. Do not skip them. Even a veteran must learn the ground they stand on.

MISSION 1 — THE FIRST FOUNDATION

Difficulty: Easy

Mission Briefing

You stand at the world's heart — spawn, at (0, 63, 0). The grass is tall, the trees are wild, and nothing here belongs to anyone. The Old Builders left no shelter. Before you can reclaim anything, you must have a place to be safe when the sun goes down. A missionary without a home is a missionary who does not last the night.

Objective

Build a **7×7 wooden house** at the mission plot, with a door, a bed, four glass windows, and twelve torches. Sleep in it before dawn.

Supplies

ITEM	QUANTITY
Oak logs	64
Oak planks	160
Cobblestone	96
Glass	16
Wooden door	1
Bed	1
Torches	12

Coordinates

LANDMARK	X	Y	Z
Plot corner (southwest)	24	64	12
Plot corner (northeast)	30	64	18
Front wall	24	64-67	12-18
Door position	26	64	12
Roof level	24-30	68	12-18

The house occupies X 24–30 and Z 12–18 — a 7×7 footprint with a 5×5 interior. Walls rise from Y 64 to Y 67. The roof caps it at Y 68.

The Plan

1. **Gather the wood.** Fell oak trees until you have 64 logs. Turn them into planks: 64 logs = 256 planks. You need 160 for the build and 96 for crafting tools and torches.
2. **Mark the plot.** Stand at (24, 64, 12). Lay a row of cobblestone along Z 12 from X 24 to X 30. This is your front wall's foundation.
3. **Raise the walls.** Build the front wall at Z 12 from Y 64 to Y 67. Leave a two-block gap at (26–27, 64, 12) for the door. Build the back wall at Z 18, and the side walls at X 24 and X 30.
4. **Add the windows.** Place glass at (25, 66, 12), (27, 66, 12), (29, 66, 12) on the front, and one more on the back wall at (27, 66, 18). Four windows, four directions of light.
5. **Roof it.** Cap the top at Y 68 with oak planks, all the way across.
6. **Furnish.** Place the door in the gap. Put the bed against the back wall at (28, 64, 17). Craft and place a crafting table and a furnace.
7. **Light it.** Place torches: one in each interior corner at Y 65, two on the front wall outside, two on the back, and four around the roof edge. Twelve torches total.
8. **Sleep.** Right-click the bed as night falls. This sets your spawn point — the first claim in your new territory.

Success Checklist

- ☐ Walls complete from Y 64 to Y 67 with no gaps
- ☐ Door closes and opens
- ☐ Four glass windows placed
- ☐ Bed placed and slept in
- ☐ Twelve torches burning
- ☐ No hostile mobs inside the house at dawn

Missionary Note

A house is the first act of claiming. Before you can bring light to the world, you need a place to keep your own. The Old Builders forgot this, and their light went out. Build small, build solid, build light — then move outward. The world is taken back one foundation at a time.

MISSION 2 — THE BREAD BASKET

Difficulty: Easy

Mission Briefing

A missionary marches on bread. The wild grass around the camp carries wheat seeds — the Old Builders' farms are gone, but their grain survives in the tall grass, waiting to be gathered and planted again. This mission turns wild seed into a working farm: the first food supply of the reclamation.

Objective

Build a **fenced 9×9 wheat farm** at the mission field, plant **32 wheat seeds**, and harvest **32 wheat**. One water source must water the whole field.

Supplies

ITEM	QUANTITY
Wheat seeds	32
Hoe (wooden or stone)	1
Water bucket	1
Fence	28
Fence gate	1
Torches	8

Coordinates

LANDMARK	X	Y	Z
Field corner (northwest)	−45	63	80
Field corner (southeast)	−37	63	88
Water channel	−41	63	84
Fence perimeter	−46 to −36	63	79 to 89
Gate	−45	63	84

The field spans X −45 to −37 and Z 80 to 88. A single water source at (−41, 63, 84) sits in the middle, hydrating all 80 farmland blocks around it.

The Plan

1. **Collect the seeds.** Break tall grass until you have 32 wheat seeds. (You may find more — keep them; you will need them.)
2. **Till the field.** With the hoe, till every block in the 9x9 area except the center block at (−41, 63, 84).
3. **Water it.** Use the water bucket at the center. The water will flow one block in every direction, hydrating the entire field. Cover the source with a slab if you want to walk across without falling in.
4. **Plant.** Plant all 32 seeds in the tilled soil. If you have more seeds, plant them too — a full field is a richer harvest.
5. **Fence it.** Ring the field with fence: 28 pieces, one block outside the tilled edge. Place the fence gate on the west side at (−45, 63, 84) so the field stays open to you and closed to mobs.
6. **Light the edges.** Place 8 torches on the fence corners and midpoint posts so no mobs spawn on or near the field at night.
7. **Wait and harvest.** Wheat grows in stages. When it is golden and tall, break it and collect the wheat. You need 32 in your inventory to complete the mission — but replant the seeds you drop. A bread basket is a cycle, not a one-time harvest.

Success Checklist

- ☐ 32 wheat harvested and in inventory
- ☐ Field fully fenced with a working gate
- ☐ One water source hydrating the field
- ☐ 8 torches placed around the perimeter
- ☐ Seeds replanted for the next harvest

Missionary Note

The world will not feed you because you ask. It feeds you because you work. The Old Builders' fields were overtaken by grass the moment they stopped tending them — that is the law of this world: whatever you do not tend, the wild takes back. A farm is a promise you renew every day.

MISSION 3 — THE LANTERN ROAD

Difficulty: Easy

Mission Briefing

The way from spawn to the eastern ridge is dark, and in the dark the world's creatures hunt. The Old Builders believed roads were for carts. The missionary knows better: roads are for light. A lit road is a line drawn through the night, a claim staked in torchlight from horizon to horizon.

Objective

Light a **torch path** from spawn (0, 63, 0) to the eastern ridge at (100, 64, 100), placing **32 torches** along the route. Then build a **10-block-high torch tower** at the ridge and light its crown.

Supplies

ITEM	QUANTITY
Coal	48
Sticks	48
Cobblestone	64
Stone slabs	32

(48 coal + 48 sticks = 48 torches. You will place 32 on the road, keep the rest for the tower and spares.)

Coordinates

LANDMARK	X	Y	Z
Path start	0	63	0
Path end (ridge)	100	64	100
Torch spacing	every 3 blocks along the diagonal	—	—
Tower base	100	64	100
Tower crown	100	74	100

The path runs diagonally northeast: X and Z rise together, 0 → 100. Place a torch every 4 blocks: (4, 63, 4), (8, 63, 8), (12, 63, 12), and so on until (100, 64, 100).

The Plan

1. **Gather fuel and light.** Mine 48 coal. Craft 48 sticks, then 48 torches. (You will need more later in the book — this is your first torch run; it will not be your last.)
2. **Pave the stepping stones.** Lay cobblestone and slabs in short stretches along the diagonal so the route is walkable. You do not need a full road — a missionary builds for light, not for carts.
3. **Plant the torches.** Starting at (3, 63, 3), place a torch roughly every three blocks along the diagonal — about 32 torches over the run. Where the ground rises, put the torch on a cobblestone stub so it never sits below your eye line.
4. **Reach the ridge.** The path ends at (100, 64, 100). From here you can see back to spawn — which is exactly the point.
5. **Build the tower.** At (100, 64, 100), stack cobblestone to Y 74. Place a torch on top of the crown and four more around the sides at Y 73. This is the Lantern of the East: the first landmark of the reclamation.
6. **Check the gaps.** Walk the path at night. No stretch of darkness may exceed 8 blocks. Add torches where the light pools thin.

Success Checklist

- ☐ 32 torches placed along the path at roughly 4-block intervals
- ☐ Path visible end to end at night from spawn
- ☐ Tower at (100, 64, 100) standing 10 blocks high
- ☐ Tower crown lit with 5 torches
- ☐ No dark gap longer than 8 blocks anywhere on the route

Missionary Note

Light is the first weapon of the missionary. Mobs do not respect your sword until they fear your torches. Every torch you plant is a small sermon: this ground is claimed, this ground is watched, this ground belongs to the light again.

MISSION 4 — THE WATCHTOWER

Difficulty: Easy

Mission Briefing

To the northwest, the forest opens into a plain that the Old Builders called the Quiet Field. It is not quiet anymore — it is overtaken. From the rise at (−120, −40) you can see the whole plain, and something else: the first true test of a builder. A tower that can see is a tower that can warn. The reclamation needs eyes.

Objective

Build a **12-block-high watchtower** at the mission site, with a working ladder, a fenced observation platform, and **16 torches**. From the top, you must be able to see the Lantern of the East at (100, 64, 100).

Supplies

ITEM	QUANTITY
Cobblestone	192
Oak planks	96
Ladders	24
Fence	16
Glass	8
Torches	16

Coordinates

LANDMARK	X	Y	Z
Tower footprint (southwest corner)	−120	64	−40
Tower footprint (northeast corner)	−114	64	−34
Base height	−120 to −114	64–65	−40 to −34
Wall tops	−120 to −114	76	−40 to −34
Observation platform	−119 to −115	76	−39 to −35
Ladder (north face)	−117	64–75	−40
Windows	−120	70	−37, and −117

The tower is a 7×7 hollow shaft. Its walls rise from Y 64 to Y 76 — 12 blocks of stone against the sky.

The Plan

1. **Gather stone.** Mine 192 cobblestone. A nearby hill should cover most of it.
2. **Lay the base.** Build the 7×7 footprint two blocks high (Y 64–65). Leave the inside hollow.
3. **Raise the shaft.** From the base, raise the four walls to Y 76 — ten more blocks. Leave the ladder shaft open on the north face at (–117, Z –40).
4. **Windows.** At Y 70, place glass at (–120, 70, –37) on the west wall and (–117, 70, –40) on the north wall. Small windows, watchful eyes.
5. **The ladder.** Run ladders up the north face shaft from Y 64 to Y 75 — 24 ladders, no gaps. Test the climb.
6. **The platform.** At Y 76, floor the top with oak planks. Ring it with fence. Place torches in the four corners and along the fence — 16 torches total on the tower.
7. **Look east.** From the platform, face (100, 64, 100). If the night is clear, the Lantern of the East answers your light with its own.

Success Checklist

- ☐ Tower stands 12 blocks from base to platform
- ☐ Ladder climbs the full height without gaps
- ☐ Platform floored and fully fenced
- ☐ 16 torches placed
- ☐ Lantern of the East visible from the top

Missionary Note

The Watchtower teaches the second law of the mission field: see before you are seen. The creatures of the overtaken world ambush what they can surprise. A tower does not fight for you — it sees for you, and seeing is half the battle. Raise your eyes, and the night loses its advantage.

MISSION 5 — THE FIRST DESCENT

Difficulty: Easy

Mission Briefing

The surface can feed you and shelter you, but it cannot arm you. Iron waits below — and below is where the world keeps its oldest secrets and its darkest rooms. Every missionary must learn to go down. This mission teaches the descent: a proper shaft, a proper ladder, a proper light discipline, and the first real ore of the reclamation.

Objective

Dig a **1×2 vertical shaft** at the mission site down to **Y 16**, then branch-mine the tunnel at Y 16 and collect **32 iron ore**.

Supplies

ITEM	QUANTITY
Stone pickaxes	3
Ladders	40
Torches	32
Oak planks	32
Cooked food	16

Coordinates

LANDMARK	X	Y	Z
Shaft mouth	50	63	−70
Shaft bottom	50	16	−70
Branch tunnel	50 → 70	16	−70
Side branches	50 → 70	16	−72 and −68

The shaft drops 47 blocks straight down from (50, 63, −70) to (50, 16, −70). At the bottom, a branch tunnel runs east from X 50 to X 70 at Y 16, with side branches at Z −72 and Z −68.

The Plan

1. **Prepare.** Craft 3 stone pickaxes (48 cobblestone + 3 sticks × 3), 40 ladders, and 32 torches. Eat before you descend — mining is hungry work.
2. **Dig the shaft.** At (50, 63, −70), dig a 1×2 hole straight down. Place ladders on one side of the shaft as you go, every block, no gaps. Torch the shaft every 8 blocks as you descend.
3. **Follow the floor.** When your Y readout says 16, stop. You are at the mission floor — deep enough for iron in abundance, safe from lava lakes above the diamond layer.
4. **Branch-mine.** Dig the main tunnel east from (50, 16, −70) to (70, 16, −70). Then dig side branches two blocks apart at Z −72 and Z −68, 20 blocks long each. This pattern exposes the most ore for the least digging.
5. **Collect the iron.** Mine every iron ore block you find with your stone pickaxe. Do not smelt yet — this mission is about gathering. You need 32 blocks of iron ore in your inventory.
6. **Light as you go.** Torch every tunnel every 8 blocks. A dark tunnel is a mob nursery. You are a missionary of light — even underground.
7. **Come back up.** Climb the ladder. Check your Y as you rise: 20, 30, 40, 50, 60 — the world's floors rolling past like stairs.

Success Checklist

- ☐ Shaft bottom reached at Y 16
- ☐ Ladders placed the full 47-block descent
- ☐ Branch tunnels dug to spec
- ☐ 32 iron ore in inventory
- ☐ Every tunnel lit, no spawns in the shaft

Missionary Note

The descent is the third lesson: the world's wealth is buried, and so is its danger. The Old Builders mined greedily and left their shafts dark; the creatures of the deep moved in behind them. When you go down, light everything and leave nothing behind. A clean mine is a claim that stays claimed.

TIER II — NORMAL

The middle five missions take you farther from spawn and deeper into the world. You will carve rooms out of the earth, run iron through fire, bridge a chasm, cross into the Nether, and make redstone obey. The easy days are over; the great work begins.

MISSION 6 — THE UNDERGROUND STRONGROOM

Difficulty: Normal

Mission Briefing

The surface is safe now — your house stands, your farm feeds you, your tower watches. But a missionary's treasure should not sit where every wandering eye can see it. Two hundred blocks east and three hundred south, a hill hides a secret: the perfect place for a strongroom. You will cut a staircase into the hill and carve a home out of the earth's bones.

Objective

Cut a **staircase tunnel** from the surface at (200, 63, 300) down to **(200, 30, 300)**, then carve a **15×15×4 room** around that point and furnish it with 16 chests, 8 furnaces, 4 crafting tables, and a bed.

Supplies

ITEM	QUANTITY
Torches	64
Chests	16
Furnaces	8
Crafting tables	4
Ladders	64
Doors	2
Bed	1
Iron ingots	32

(The iron ingots are for the door hinges and the furnace upgrades — a strongroom without iron is a pantry.)

Coordinates

LANDMARK	X	Y	Z
Tunnel mouth (surface)	200	63	300
Staircase	200	63 → 30	300

LANDMARK	X	Y	Z
Room floor (southwest corner)	193	30	293
Room floor (northeast corner)	207	30	307
Ceiling	193-207	34	293-307

The staircase drops 33 blocks straight down the Z axis at X 200. At Y 30, the room opens: X 193-207, Z 293-307 — a 15×15 floor with a 4-block ceiling height.

The Plan

1. **Mark the mouth.** At (200, 63, 300) on the hillside, dig a 2-wide entrance.
2. **Cut the staircase.** Dig down in a straight run, 2 blocks wide, with a step down every block. Torch both walls every 8 blocks. Check your Y as you go: 55, 45, 35 — and stop at 30.
3. **Carve the room.** At Y 30, expand in all directions to the corners (193, 30, 293) and (207, 30, 307). Cut the ceiling flat at Y 34.
4. **Seal and light.** Line the walls with torches on every pillar face — a 15×15 room needs about 40 torches to stay spawn-proof. Place the rest along the staircase.
5. **Furnish.** Chests against the north and south walls — 8 per wall, 16 total. Furnaces along the east wall — 8 of them. Crafting tables in the four corners. Bed against the west wall.
6. **Doors.** Place a door at the tunnel mouth and a second at the room entrance. The strongroom is yours; the world stays outside.
7. **Inventory.** Fill the chests with everything you have gathered so far — iron ore from Mission 5, wheat from Mission 2, spare cobble and coal. A missionary who loses his stores loses his momentum.

Success Checklist

- ☐ Staircase complete from Y 63 to Y 30, fully lit
- ☐ Room carved to exact 15×15×4 dimensions
- ☐ 16 chests placed
- ☐ 8 furnaces placed
- ☐ 4 crafting tables placed
- ☐ Bed placed; no mob spawns anywhere in the room

Missionary Note

The strongroom is the fourth lesson: what you gather, you must guard. The Old Builders piled their wealth in the open and it was scattered in a single night. Bury what you love, light what you bury, and the world will have to work to take it from you.

MISSION 7 — THE IRONWORKS

Difficulty: Normal

Mission Briefing

Your chests are full of iron ore, but ore is only a promise. Iron becomes useful only when it passes through fire. Three hundred fifty blocks east of spawn, an outcrop of stone at (350, 64, 100) is the natural site for the Ironworks — a row of furnaces that will turn the promise of ore into the currency of the reclamation: iron ingots.

Objective

Build an **8-furnace smelting works** at the mission site with a **hopper-fed chest system**, then smelt **64 iron ingots** and bank them in the chest.

Supplies

ITEM	QUANTITY
Iron ore	64 (mined, not smelted)
Cobblestone	128
Furnaces	8
Chests	4
Hoppers	8
Coal	64
Crafting table	1

Coordinates

LANDMARK	X	Y	Z
Furnace row	350 → 357	64	100
Hopper row (below)	350 → 357	63	100
Collection chests	352-353	62	102-103

Eight furnaces sit in a row along Z 100, X 350 through 357. Each furnace feeds a hopper directly beneath it at Y 63; the hoppers feed chests at (352-353, 62, 102-103).

The Plan

1. **Feed the mission.** Mine 64 iron ore if your stores are short — follow the Mission 5 branch-mine pattern in fresh ground. You also need 64 coal: any coal seam at Y 16–40 will do.
2. **Build the works.** Place 8 furnaces in a row: (350, 64, 100) through (357, 64, 100).
3. **Plumb the hoppers.** Dig out the blocks beneath each furnace (Y 63) and place a hopper there, pointed down. Dig a small channel at Y 62 leading to the chest position at (352–353, 62, 102–103). Place the four chests.
4. **Wire the flow.** Each hopper must point toward the next until the line reaches the chests. Sneak-place the hoppers facing the correct direction — this is the fiddliest step, and the most rewarding.
5. **Fire the works.** Load each furnace with 8 coal and 8 iron ore. Light them. As each ingot smelts, the hopper below catches it and carries it to the chest.
6. **Bank the ingots.** Run the works until 64 iron ingots sit in the chest. Count them. When the count is right, the mission is done.

Success Checklist

- ☐ 8 furnaces in a row at the mission coordinates
- ☐ 8 hoppers connected, all feeding the chest line
- ☐ 4 chests placed and reachable
- ☐ 64 iron ingots banked in the chest
- ☐ Works lit and safe to operate at night

Missionary Note

Ore is potential; ingot is power. The Ironworks teaches the fifth lesson: build systems, not just things. The Old Builders smelted one furnace at a time and spent their days tending fires. You will build a machine that tends itself while you do the next mission. Systems are how a single missionary reclaims a world.

MISSION 8 — THE CHASM BRIDGE

Difficulty: Normal

Mission Briefing

Four hundred blocks east of spawn, the land tears open. A ravine — the Old Builders called it the God-Split — runs for hundreds of blocks, darker than a wound, deeper than a well. The eastern lands beyond it hold the Nether gate site, but the ravine blocks the way. The creatures below own the dark. The missionary's answer is not to go around. The missionary's answer is to build across.

Objective

Bridge the ravine from the **west lip at (400, 70, -200)** to the **east lip at (470, 70, -180)**, with a 2-wide plank deck, fences on both sides, and 16 torches. Cross it safely.

Supplies

ITEM	QUANTITY
Oak planks	192
Fence	192
Torches	16
Cobblestone	64

Coordinates

LANDMARK	X	Y	Z
West lip	400	70	-200
East lip	470	70	-180
Deck	400 → 470	70	-200 → -180
Torch spacing	every 8 blocks along the deck	—	—

The ravine runs roughly southwest-northeast. The bridge crosses at Y 70, 7 blocks above the surrounding ground (Y 63). The deck runs about 70 blocks from X 400 to X 470, drifting south as it goes (Z -200 to -180).

The Plan

1. **Scout both lips.** Walk the ravine edge at (400, 70, -200) and find the matching ledge at (470, 70, -180). Mark both with torches.
2. **Build the anchor.** At the west lip, lay a cobblestone pad 4×4 so the bridge has a solid footing.
3. **Push the deck.** Walk out from the pad, placing planks in pairs — two wide, one block of air on either side. Check the ravine floor below: it is a long way down. Do not look too long.
4. **Fence as you go.** After every two plank pairs, place fence along both edges. It feels slow. It is what keeps you alive.
5. **Light the way.** Every 8 blocks, a torch on the fence — 16 in all. The God-Split will glow like a river of fireflies.
6. **Reach the far pad.** Build a matching cobblestone pad on the east lip at (470, 70, -180). The deck now spans lip to lip.
7. **Cross it.** Walk the full length, west to east. Do not sprint. Do not jump. The bridge is yours; walk it like you own it.

Success Checklist

- ☐ Deck 2 blocks wide, no gaps anywhere along the span
- ☐ Fence on both sides for the full length
- ☐ 16 torches placed at intervals
- ☐ Anchor pads on both lips
- ☐ Crossed the ravine safely, no falls, no deaths

Missionary Note

The bridge is the sixth lesson: obstacles are invitations. The Old Builders looked at the God-Split and saw the end of their road; they turned back, and their eastern claims were lost. The missionary looks at a chasm and sees a path that does not exist yet — and then builds it. Every block you place over the void is a refusal to be stopped.

MISSION 9 — THE GATE TO EMBER

Difficulty: Normal

Mission Briefing

Five hundred blocks east and four hundred south, the air changes. The trees thin, the grass yellows, and the ground feels hot underfoot. The Old Builders' maps mark this place with a single word: EMBER. This is where the world's second layer begins — the Nether, a dimension of fire and ash. The missionary does not fear it; the missionary gates into it, claims a foothold, and comes back with proof.

Objective

Build and light a **Nether portal** at the mission site, enter the Nether, build a **5×5×4 obsidian-and-cobble bunker** at the Nether landing point, and return to the Overworld with **16 netherrack** and **4 glowstone**.

Supplies

ITEM	QUANTITY
Obsidian	14
Flint and steel	1
Diamond pickaxe	1
Cobblestone	64
Torches	16
Cooked food	16
Iron sword	1

Coordinates

LANDMARK	X	Y	Z
Portal frame (Overworld)	500	64	−400
Portal arrival (Nether)	62	64	−50
Nether bunker corner	60	64	−52
Nether bunker corner	64	64	−48

(Nether coordinates are roughly the Overworld's divided by 8: $500 \div 8 \approx 62$, $-400 \div 8 = -50$.)

The Plan

1. **Gather obsidian.** Find a lava pool and pour water over it — or mine the obsidian you find with the diamond pickaxe. You need 10 blocks.
2. **Frame the gate.** At (500, 64, -400), build the portal frame: 4 wide × 5 tall (the minimum size), 14 obsidian total. The opening must be exactly 4×5 — 3 wide × 4 tall inside.
3. **Strike the light.** Use the flint and steel on the bottom-inside block. The purple veil rises. The Gate to Ember is open.
4. **Step through.** When you arrive, you are at roughly (62, 64, -50). Do not wander. The Nether rewards the prepared and devours the curious.
5. **Claim the landing.** Immediately build the bunker: a 5×5 floor, walls 4 high, cobblestone roof — enclosing the portal. Cobblestone survives ghast fire; wood does not. Torch the inside.
6. **Gather proof.** With your iron sword ready, collect 16 netherrack (the red rock is everywhere underfoot) and 4 glowstone (the yellow glowing clusters in the ceiling). Watch for the piglin caravans — they are not enemies unless you open their chests. The ghasts are enemies. Always.
7. **Return.** Step back through the portal. The Overworld at (500, 64, -400) has never looked so green.

Success Checklist

- ☐ Portal frame 14 obsidian, lit and functional
- ☐ Bunker built around the Nether landing, fully enclosed
- ☐ 16 netherrack collected
- ☐ 4 glowstone collected
- ☐ Returned to the Overworld alive, portal still lit

Missionary Note

The Nether is the seventh lesson: there are worlds within worlds, and none of them are empty. The Old Builders' maps stopped at the edge of their known ground, and so did they. The missionary crosses edges. Fear is a fine counselor and a terrible king — take it with you, but never let it give the orders.

MISSION 10 — THE REDSTONE RIVER

Difficulty: Normal

Mission Briefing

The Old Builders left one gift behind that they did not understand: redstone — dust that carries a pulse, a mineral nervous system sleeping in the earth. They used it for trinkets and threw the rest away. The missionary knows better. Redstone is obedience, made physical. This mission builds the Redstone River: a line of lamps that answers a single lever, sixty blocks from end to end.

Objective

Collect **64 redstone dust**, then build a line of **8 redstone lamps** from (620, 63, 300) to (680, 63, 300), wired with **4 repeaters**, and light all 8 lamps with **one lever**.

Supplies

ITEM	QUANTITY
Redstone dust	64 (mined)
Redstone lamps	8
Glowstone	8
Redstone repeaters	4
Redstone torches	16
Levers	2
Stone pickaxe	2

Coordinates

LANDMARK	X	Y	Z
Lamp line start	620	63	300
Lamp positions	620, 628, 636, 644, 652, 660, 668, 676	63	300
Repeater positions	628, 644, 660, 676	63	300
Master lever	620	63	301

Eight lamps, spaced 8 blocks apart, from X 620 to X 676. Repeaters boost the signal at 16-block intervals. The lever sits at (620, 63, 301), one block off the line.

The Plan

1. **Mine the dust.** Redstone lives at Y 5–15. Branch-mine fresh ground near your strongroom until you have 64 redstone dust. You will also need it for the repeaters — budget 4 dust for those.
2. **Craft the lamps.** 8 glowstone from Mission 9 + 32 redstone dust = 8 redstone lamps.
3. **Lay the line.** Place the lamps in a straight row at the mission coordinates. The line runs east from X 620.
4. **Wire it.** On the ground beside the lamps, lay redstone dust from lamp to lamp. Redstone carries a signal 15 blocks before it fades — so at X 628, 644, 660, and 676, place a repeater facing along the line to refresh the pulse.
5. **The lever.** Place the lever at (620, 63, 301), attached to the block next to the first lamp. Flip it.
6. **Watch the river light.** The pulse runs east, lamp after lamp, repeater after repeater: 620, 628, 636, 644, 652, 660, 668, 676 — eight points of light answering one finger.
7. **Redstone torches.** Place the 16 redstone torches along the back side of the line as indicators — they glow only while the signal is off, so you can read the river's health at a glance.

Success Checklist

- ☐ 64 redstone dust mined
- ☐ 8 lamps placed at the mission coordinates
- ☐ 4 repeaters placed at the 16-block intervals
- ☐ One lever lights all 8 lamps
- ☐ Signal runs end to end without a break

Missionary Note

Redstone is the eighth lesson, and the strangest: the world obeys. Not through prayer or force, but through understanding. The Old Builders had this power in their hands and used it for toys. The missionary uses it for reach — a single hand, a hundred blocks away, doing the work of ten. Master the rules of the world, and the world becomes your tool.

TIER III — HARD

The final five missions cross the world's true frontiers: the stronghold under the hills, the End beyond the sky, the sunken palace, the heights above the clouds, and finally — the

heart of it all. These missions will test everything the first ten taught you. Bring your best gear. Bring your patience. Bring your faith in the work.

MISSION 11 — THE STRONGHOLD HUNT

Difficulty: Hard

Mission Briefing

The Old Builders' greatest secret was not a building — it was a door. Somewhere beneath the eastern hills lies the stronghold, a buried fortress of stone and silverfish, and at its heart, a portal that no living builder has ever used. The way to find it is written in the world's own language: the Eye of Ender, which always flies toward the door. This mission is a hunt.

Objective

Craft **12 Eyes of Ender**, track the stronghold from (700, 64, 100), enter it at **(812, 34, 213)**, and clear and light its library. **24 bookshelves** must survive intact.

Supplies

ITEM	QUANTITY
Ender pearls	12
Blaze powder	12
Bow	1
Arrows	32
Torches	64
Cooked food	32
Iron armor (full set)	1 set

Coordinates

LANDMARK	X	Y	Z
Hunt start	700	64	100
Stronghold staircase	812	34	213
Library floor (southwest corner)	806	32	209
Library floor (northeast corner)	817	32	216
Portal room (next mission)	812	30	213

The stronghold burrows through the hills at Y 30–40. The library sits 12 blocks wide and 8 deep at Y 32, its bookshelves lining the walls.

The Plan

1. **Craft the eyes.** 12 ender pearls + 12 blaze powder = 12 Eyes of Ender. (Blaze powder means a Nether trip for blaze rods — use your Gate to Ember bunker as your base of operations.)
2. **Throw and follow.** Stand at (700, 64, 100). Throw an Eye of Ender; it floats toward the stronghold. Walk in that direction. When it drops to the ground, pick it up, walk past it, throw again. Repeat.
3. **Watch it sink.** The eyes will eventually fly *down* into the hillside and shatter. Dig where they vanish. You are over the stronghold.
4. **Find the stairs.** Descend until you hit the stone-brick corridors of the stronghold around Y 34. Locate the staircase at (812, 34, 213).
5. **Clear the library.** Fight the silverfish in swarms — they burst from mined stone brick, so break blocks with your sword ready. The library is the largest room: high ceiling, double-decker bookshelves, a ladder, and a chest with loot.
6. **Light and count.** Torch every corner and aisle — 64 torches is enough for the library and the corridors around it. Count the bookshelves: 24 must remain. Do not break them. They are the stronghold's last library, and they are older than the Old Builders themselves.
7. **Report the door.** In the room beneath the library, at (812, 30, 213), you will find the portal frame — the End Portal, unlit, waiting. Leave it for Mission 12. Your mission here is done.

Success Checklist

- ☐ 12 Eyes of Ender crafted and used
- ☐ Stronghold entered at (812, 34, 213)
- ☐ Library cleared of mobs and fully lit
- ☐ 24 bookshelves intact
- ☐ End Portal frame located and marked

Missionary Note

The hunt is the ninth lesson: some doors cannot be built — they must be found. The Old Builders bricked over their greatest gate and forgot it, the way people bury what they fear to finish. The Eye of Ender does not lie; it flies toward what was hidden. Follow the truth of the world, even when it leads you underground.

MISSION 12 — THE END

Difficulty: Hard

Mission Briefing

The portal at (812, 30, 213) opens onto the End: a black sky, an island of pale stone, and the Ender Dragon — the world's oldest tyrant, the reason the Old Builders sealed the door and fled. The missionary's commission does not stop at the edge of the map. It stops only when the tyrant falls. This is the mission the whole book has been building toward. Arm yourself, step through, and end the End.

Objective

Activate the End Portal at the stronghold, enter the End, **defeat the Ender Dragon**, and return through the gateway with the **dragon egg**.

Supplies

ITEM	QUANTITY
Eyes of Ender	12 (for the portal)
Bow	1 (enchanted with Power if you have it)
Arrows	128
Golden apples	8
Water buckets	3
End stone (bridging)	64
Diamond pickaxe	1
Slow Falling potions	3
Cooked food	32

Coordinates

LANDMARK	X	Y	Z
Portal room (Overworld)	812	30	213
Arrival platform (End)	100	50	0
Central pillar ring	0–20 from center	65–80	0
Dragon egg (after victory)	0	65	0

LANDMARK	X	Y	Z
Return gateway	100	50	0

The Plan

1. **Fill the frame.** Place an Eye of Ender in each of the 12 frame blocks around the portal at (812, 30, 213). The green fire lights. Step back, then step through.
2. **Arrive.** You stand on the obsidian platform at (100, 50, 0). The dragon circles the island's central spire. Take a breath. This is the moment the book promised.
3. **Destroy the crystals.** The dragon cannot die while the end crystals heal it. The crystals sit on obsidian pillars ringing the island. Build up each pillar with end stone, break the crystal with your pickaxe or a well-aimed arrow, and — critically — **break the iron bars beneath it** or the dragon will re-heal. Protect yourself: the dragon's fire breath and wing buffet are the real weapons. Golden apples and the water buckets (for quick drops) are your insurance.
4. **Drink, then bridge.** When the crystals are gone, the dragon can be hurt. Drink a Slow Falling potion before long descents. Bridge across the void with end stone to reach the dragon as it perches on the central spire at the ring's heart.
5. **Bring it down.** Arrow after arrow, the dragon spirals lower. When it perches on the spire, charge. Its health bar drains. Keep firing.
6. **Collect the egg.** The dragon dies in a shower of light — and on the spire at (0, 65, 0) rests the dragon egg, black as the old sky. Mine the block beneath it carefully so it falls to a torch and becomes an item. It is yours now.
7. **Return.** The gateway at (100, 50, 0) opens. Step through, and the Overworld rises around you: green, safe, and *free*. The tyrant of the End has fallen, and the missionary who fell it stands in the light.

Success Checklist

- ☐ Portal activated with 12 eyes
- ☐ All end crystals destroyed
- ☐ Ender Dragon defeated
- ☐ Dragon egg collected at (0, 65, 0)
- ☐ Returned alive through the gateway at (100, 50, 0)

Missionary Note

The End is the tenth lesson, and it is the heart of the whole book: the thing that overtook the world is not a mob, not a curse, not a dragon. It is the fear that made the Old Builders seal the door instead of walking through it. The dragon is real, and it is killable. Nothing that casts a shadow is stronger than the one who walks toward it with light in hand.

MISSION 13 — THE SUNKEN PALACE

Difficulty: Hard

Mission Briefing

The ocean east of the ravine holds a palace the Old Builders never finished building and never dared to enter: a monument of dark prismarine, guarded by the elder guardians — ancient fish of pure malevolence that curse all who approach. Beneath it lies a fortune: sponges, gold, and the deep-sea crystal called prismarine, which glows with the light of the sea itself. The missionary does not loot ruins. The missionary *clears* them.

Objective

Enter the ocean monument at **(950, 62, -500)**, defeat the **3 elder guardians**, mine **64 prismarine** and **16 sponge**, and build an **active conduit** at (950, 60, -500).

Supplies

ITEM	QUANTITY
Conduit	1
Prismarine	42 (for the conduit frame)
Water Breathing potions	3
Doors	16 (air pockets under water)
Glowstone	16
Iron pickaxe	2
Cooked food	32

Coordinates

LANDMARK	X	Y	Z
Monument entrance	950	62	-500
Monument bounds	940-960	58-80	-510 to -490
Elder guardian (west wing)	943	62	-505
Elder guardian (east wing)	957	62	-495
Elder guardian (top)	950	78	-500
Conduit site	950	60	-500

The monument is 20 blocks square, rising from Y 58 to Y 80 — an underwater mountain of dark stone. The conduit goes at its heart, at the entrance level.

The Plan

1. **Prepare for the deep.** Drink a Water Breathing potion before you swim in. Bring all three — the mission is long.
2. **Enter.** At (950, 62, -500) you find the entrance tunnel. Place doors as air pockets along the way — doors hold air under water, and air is where you catch your breath.
3. **The elders.** Three elder guardians haunt the monument: one in the west wing (943, 62, -505), one in the east wing (957, 62, -495), one in the top chamber (950, 78, -500). Each curses you with mining fatigue. Kill them with your pickaxe — they are slow and clumsy outside water's protection.
4. **Strip the palace.** Mine prismarine from the walls and floors — you need 64. The blocks cut slowly under water; the conduit will fix that. Break the sea lanterns for extra light and place your glowstone in the corridors.
5. **The sponge room.** Find the sponge rooms (they are the rooms whose floors are sand, not prismarine). Break the sponges — 16 of them. They will be priceless when you build underwater again.
6. **Build the conduit.** At (950, 60, -500), build the full-power frame: three 5×5 rings of prismarine — one horizontal, two vertical — crossing through the conduit block at the center. 42 prismarine blocks total. When the frame is complete, the conduit activates — and suddenly, within its range, you can breathe, you can see, and you can mine like the sea itself is on your side.
7. **Light the heart.** Place the remaining glowstone around the conduit so the heart of the palace glows like a lantern in a cathedral.

Success Checklist

- ☐ All 3 elder guardians defeated
- ☐ 64 prismarine mined
- ☐ 16 sponge collected
- ☐ Conduit active at (950, 60, -500) with full frame
- ☐ Monument fully lit, no guardians remaining

Missionary Note

The sunken palace is the eleventh lesson: what is deepest is often what is most afraid of light. The elders did not defend the monument — they hid in it, and their curse was only fear made visible. The conduit, a heart of light built from the sea's own stone, turns their fortress into a lantern. Bring light to the deepest place, and the deepest place will serve you.

MISSION 14 — THE FLOATING CITY

Difficulty: Hard

Mission Briefing

The world below is nearly yours. The fields are lit, the strongroom is full, the dragon is dead, and the sea glows with your conduit. But the missionary's work is not finished while the sky itself remains unclaimed. Twelve hundred blocks east and eight hundred south, the plains rise into a mesa — and above the mesa, nothing but air. The Old Builders looked up and saw weather. You will look up and see **the site**.

Objective

Build a **30×30 floating island** at (1200, 150, 800) with **4 buildings**, a **wheat farm**, and a **waterfall access column** from the ground at (1200, 63, 800). The island must be livable: lit, fenced, and reachable without taking fall damage.

Supplies

ITEM	QUANTITY
Dirt	256
Oak planks	256
Glass	128
Lanterns	64
Wheat seeds	32
Water bucket	1
Ladders	96
Cobblestone	128
Scaffolding (bamboo or planks)	128

Coordinates

LANDMARK	X	Y	Z
Island floor (southwest corner)	1185	150	785
Island floor (northeast corner)	1215	150	815
Waterfall column	1200	63 → 150	800

LANDMARK	X	Y	Z
Building 1 (northwest)	1188	151	788
Building 2 (northeast)	1208	151	788
Building 3 (southwest)	1188	151	812
Building 4 (southeast)	1208	151	812
Farm	1194–1206	151	794–806

The island floats at Y 150, 87 blocks above the mesa floor. Each building is 5×5. The farm is 12×12 at the island's center.

The Plan

1. **The pillar.** At (1200, 63, 800), build straight up to Y 150. Scaffold as you go. This is the spine of the Floating City.
2. **The platform.** From the pillar top, build the 30×30 floor: X 1185–1215, Z 785–815. Dirt for the farm zone, planks everywhere else.
3. **The waterfall.** At the pillar, make the climb permanent: place water at the top so it falls all the way down, and ring the column with ladders for a dry route. No more scaffolding — the city must stand on its own.
4. **Four buildings.** Raise a 5×5 house in each quadrant at the mission coordinates: plank walls, glass windows, plank roofs, one door each. Each house gets a bed, a chest, and a crafting table. Four corners, four homes, one city.
5. **The farm.** Till the center 12×12, water it from the bucket, plant 32 seeds. The Floating City eats what it grows.
6. **Light and rail.** Lanterns every 8 blocks around the island edge — 64 total. Ring the edge with glass panels so nothing and no one walks off in the night.
7. **Test the descent.** Jump from the edge? No — the missionary tests the waterfall. Climb down the ladders, walk back, and look up. The city hangs in the sky like a promise kept.

Success Checklist

- ☐ Island 30×30 at (1185, 150, 785) to (1215, 150, 815)
- ☐ 4 buildings built and furnished
- ☐ Farm planted and harvested once
- ☐ Waterfall and ladder access both functional
- ☐ 64 lanterns placed, glass railing complete

Missionary Note

The Floating City is the twelfth lesson: the world is not finished, and neither are you. The Old Builders built where the ground allowed and called it fate. The missionary builds where the work demands, and calls it vision. Height is not an obstacle — it is an opportunity. Claim the sky, and the sky will hold you.

MISSION 15 — THE BEACON OF OVERTAKING

Difficulty: Hard

Mission Briefing

Return to where you began. Spawn at (0, 63, 0) — the first plot, the first foundation, the place where the reclamation started. The world has changed since you stood here with nothing. The house stands, the farm feeds, the road glows, the tower watches, the strongroom holds, the bridge spans, the gate burns, the river runs, the stronghold is open, the dragon is dead, the sea is lit, and a city hangs in the sky. One thing is missing: a monument that tells the world *why*. This final mission builds the Beacon of Overtaking — a pyramid, a beam of light, and a wall of stone, at the very heart of the world.

Objective

Build a **4-layer beacon pyramid** (164 mineral blocks) at (−4, 63, −4) to (4, 63, 4), activate the **beacon**, surround the site with a **50×50 stone wall**, and raise a **banner** over the gate.

Supplies

ITEM	QUANTITY
Beacon	1
Mineral blocks (iron, gold, emerald, or diamond — any mix)	164
Cobblestone	512
Quartz (or white blocks for the cap)	128
Banner	1
Torches	64
Iron ingots	16 (to feed the beacon)

Coordinates

LANDMARK	X	Y	Z
Pyramid base (southwest corner)	−4	63	−4
Pyramid base (northeast corner)	4	63	4
Layer 2 (7×7)	−3 to 3	64	−3 to 3
Layer 3 (5×5)	−2 to 2	65	−2 to 2

LANDMARK	X	Y	Z
Layer 4 (3×3)	−1 to 1	66	−1 to 1
Beacon	0	67	0
Wall corner (southwest)	−25	63	−25
Wall corner (northeast)	24	63	24
Gate (west wall)	−25	63–67	0
Banner	−25	68	0

The pyramid: 9×9 at Y 63 (81 blocks), 7×7 at Y 64 (49), 5×5 at Y 65 (25), 3×3 at Y 66 (9) — 164 blocks total, crowned by the beacon at (0, 67, 0).

The Plan

1. **Gather the wealth.** You need 164 mineral blocks. Iron is the workhorse (your Ironworks can supply it); gold, emerald, and diamond from your travels fill the rest. The beacon does not care what the pyramid is made of — only that it stands.
2. **Lay the base.** At (0, 63, 0), build the 9×9 layer: X −4 to 4, Z −4 to 4.
3. **Raise the pyramid.** Layer 2 (7×7) at Y 64, centered. Layer 3 (5×5) at Y 65. Layer 4 (3×3) at Y 66. Each layer centered on (0, ?, 0). Check the math: 81 + 49 + 25 + 9 = 164.
4. **Crown it.** Place the beacon on the single block at (0, 67, 0). Feed it the 16 iron ingots. The beam erupts — a column of light that pierces the sky and can be seen from any corner of the world. Stand in its glow and select your power: Speed and Haste are the missionary's gifts.
5. **The wall.** From (−25, 63, −25) to (24, 63, 24), raise a 2-high cobblestone wall around the beacon site: 50 blocks on each side, four corners. Leave a gate gap in the west wall at (−25, 63–67, 0) — a doorway, not a barricade. The light is not for keeping people out. It is for calling them home.
6. **The banner.** Cap the gate at (−25, 68, 0) with the banner — your colors, your mark. The reclamation has a flag now.
7. **Light the ramparts.** Torches along the wall every 8 blocks — 64 total. The wall glows like a crown.
8. **The view.** Climb to the top of your own house at (24, 68, 12). Look west: the beacon's beam rises from the heart of the world. Walk the Lantern Road one last time. Count the landmarks — every one of them, yours. The world is no longer overtaken. It is *overtaken by light*.

Success Checklist

- ☐ Pyramid built to exact spec: $81 + 49 + 25 + 9 = 164$ blocks
- ☐ Beacon active, beam visible from the ground
- ☐ Wall 50×50, 2 blocks high, with gate
- ☐ Banner raised over the gate
- ☐ 64 torches on the ramparts
- ☐ View from (0, 150, 0): the world, lit, claimed, and free

Missionary Note

This is the last lesson, and it is the whole book in one beam of light: you do not reclaim the world by conquering it. You reclaim it by lighting it. The Old Builders built walls to keep the dark out and the dark simply waited. You built a light that makes the dark irrelevant. Go where the mission takes you. Build what the work demands. Light what you build. And when the night comes — and it will come — let it find a world that is already overtaken.

By the light. By the work. By the world you took back.

Mission complete.

EPILOGUE — THE OVERTAKING

The beacon burns. The world is yours.

Fifteen missions, three tiers, one world reclaimed. You began with nothing but a compass and a commission, and you end with a kingdom of light: a home at (24, 64, 12), a farm at (−45, 63, 80), a road of torches from spawn to (100, 64, 100), a tower at (−120, 64, −40), a mine at (50, 16, −70), a strongroom at (200, 30, 300), an Ironworks at (350, 64, 100), a bridge across the God-Split, a gate to the Nether at (500, 64, −400), a river of redstone at (620–676, 63, 300), a stronghold found at (812, 34, 213), an End conquered, a sea made light, a city in the sky, and a beacon at the heart of it all.

The world was overtaken once. Now it is overtaken by something better.

The book is finished. The mission is not. The world beyond the beacon still holds dark corners, unbuilt bridges, unfound strongholds. That is not a tragedy. That is the work. The missionary's commission never expires — it just changes shape.

Go, and take the next world back.

APPENDIX A — READING COORDINATES

The complete cheat sheet for every coordinate in this book.

The order is always X, Y, Z.

- **X:** east (+) or west (–)
- **Y:** up (+) or down (–) — your altitude
- **Z:** south (+) or north (–)

Sea level is Y = 63. Everything in this book measures from there.

To find any mission site: match X and Z first (that puts you in the right horizontal place), then adjust Y (that puts you at the right floor). X or Z changes mean sideways movement. Y changes mean up or down.

Nether rule: Nether coordinates are roughly Overworld $\div 8$. The portal at Overworld (500, –400) lands you at Nether (62, –50).

APPENDIX B — MASTER COORDINATE TABLE

MISSION	SITE	X	Y	Z
1 — The First Foundation	House plot	24	64	12
2 — The Bread Basket	Farm field	−45	63	80
3 — The Lantern Road	Path end / tower	100	64	100
4 — The Watchtower	Tower base	−120	64	−40
5 — The First Descent	Shaft mouth	50	63	−70
6 — The Underground Strongroom	Room floor	200	30	300

APPENDIX C — THE SUPPLIES LEDGER

The full tally of what the reclamation demands. Gather as you go; the ledger is the missionary's budget.

SUPPLY	TOTAL
Torches	340
Coal	112
Sticks	48
Oak logs / planks	64 logs, 736 planks
Cobblestone	1,376
Glass	152
Fence / fence gates	236 + 1 gate
Ladders	224
Chests	20
Furnaces	16
Crafting tables	10
Iron ingots (banked)	112
Iron ore (mined)	160
Redstone dust	64
Glowstone	12
Obsidian	14
Prismarine	106
Sponge	16
Mineral blocks (beacon)	164
Beds	6
Doors	23
Banners	1
Eyes of Ender	12
Golden apples	8

(Quantities are minimums. The missionary who gathers more never regrets it.)

APPENDIX D — GLOSSARY

- **Beacon** — a block that projects a beam of light into the sky when placed atop a mineral pyramid; grants powers to those in its glow.
- **Branch mining** — digging parallel tunnels two blocks apart to expose maximum ore for minimum effort.
- **Conduit** — a heart of prismarine and nautilus shell that grants water breathing and vision underwater when framed in prismarine.
- **Elder guardian** — the ancient, cursed fish that guard ocean monuments; they inflict Mining Fatigue.
- **End Crystal** — the healing crystal atop each obsidian pillar in the End; the dragon cannot die while they remain.
- **Eye of Ender** — crafted from ender pearl and blaze powder; flies toward the nearest stronghold when thrown.
- **Ender Dragon** — the tyrant of the End dimension, and the final boss of the mission field.
- **Ghast** — a large floating fire creature of the Nether that fires explosive fireballs.
- **God-Split** — the ravine crossed by the Chasm Bridge; a missionary landmark.
- **Hopper** — a block that moves items from one container to another; the heart of any automated system.
- **Lantern of the East** — the torch tower at (100, 64, 100), first landmark of the reclamation.
- **Nether** — the dimension of fire reached through a lit obsidian portal; coordinates are roughly one-eighth of the Overworld's.
- **Piglin** — a gold-loving creature of the Nether; neutral unless provoked.
- **Repeater** — a redstone component that refreshes and delays a signal, letting it travel farther than 15 blocks.
- **Silverfish** — a small mob that bursts from mined stone brick in strongholds; swarm with friends.
- **Spawn** — the point (0, 63, 0) where you first entered the world and where the reclamation began.

Minecraft Overtaken — A Missionary's Guide to Reclaiming the Blocky World. Written in the mission field, block by block.

The End.
